# **Examinations and Diagnostic Tests**

# Get ready!

- Before you read the passage, talk about these questions.
  - 1 What are some of the tests performed by a PT, and what do they measure?
  - 2 Why are PTs concerned about the underlying cause of a problem?

Name: Simon Walsh Gender: M

Age: 47

Presenting Problem/Current Condition:

Patient was admitted to the hospital yesterday to treat acute knee pain. The **primary impairment** is limited mobility and pain in the right knee. The **underlying cause** is damage to a previously torn ACL.

#### Medical History:

- · ACL tear 5 years ago
- · Medical diagnosis of osteoarthritis in knee joints
- · Level of dysfunction is mild to moderate

#### Social History:

- Non-smoker
- Avid runner
- Moderate alcohol use

## Other Information:

Primary care physician recommends physical therapy to build muscle strength. MRI **interpretation** shows worn cartilage and joint damage.

## Examination: Tests were administered to measure:

- Goniometry
- · Gait analysis
- Posture analysis

**Evaluation:** Analysis of test results provides an objective baseline. Strengthening exercises suggested in accordance with preferred practice patterns.

Diagnostic category: musculoskeletal

Follow-up: Weekly appointments scheduled for six weeks. Additional treatment options are to be determined.

## Reading

- 2 Read the patient chart. Then, choose the correct answers.
  - 1 What is the underlying condition causing the patient's pain?
    - A He is an avid runner.
    - B He has a diagnosis of osteoarthritis in his knees.
    - C He previously injured his ACL.
    - D The doctor did not interpret the MRI.
  - 2 How often will the patient see a physical therapist?
    - A every day for six weeks
    - B once a week for six months
    - C every day for a week
    - D once a week for six weeks
  - 3 Which test was NOT performed by the PT?
    - A a posture analysis
- C a gait analysis
- B an MRI
- **D** goniometry

# Vocabulary

- 3 Match the words or phrases (1-7) with the definitions (A-G).
  - 1 \_ goniometry 5 \_ gait analysis
  - 2 interpretation 6 objective baseline
  - 3 examination 7 \_\_ diagnostic category
  - 4 \_ dysfunction
  - A an evaluation of the way a patient walks
  - B a thorough inspection of a patient to determine physical health
  - C the way a person reads and processes information and forms conclusions
  - D a system used to measure range of motion in a joint
  - E a group of identified patterns of symptoms of physical limitations
  - F abnormal function, the inability to use an organ or body part fully
  - G the point from which changes are measured during a patient's treatment
